

Francis G. Galo

Workflow Automation Specialist

Cebu, PH · [linkedin.com/in/francis-galo/](https://www.linkedin.com/in/francis-galo/) · gal.francis23@gmail.com · gal-automates.vercel.app

PROFESSIONAL SUMMARY

AI Automation Specialist with 9 years of operations experience across data analysis and technical support. I build production workflows using n8n, Make, and Zapier — connecting AI Agents, Google Workspace, Vapi, Supabase, and Airtable into systems that eliminate manual work and save real hours. My advantage is simple: I understand the operational problems from the inside, so I know exactly where automation creates the most impact. My goal is to build systems the business can depend on after I'm gone — dependable, secure, and maintainable by someone who didn't build it.

KEY SKILLS

Automation Platforms: n8n, Make, Zapier, GoHighLevel

AI & APIs: Claude, GPT, OpenRouter, Gemini, REST APIs, Webhooks

AI Development: Claude Code, MCP (Model Context Protocol), Prompt Engineering

Voice & Video AI: Vapi, ElevenLabs, HeyGen

Databases & Storage: Supabase, Airtable, Google Sheets

Integrations: Typeform, Xero API, html2pdf.app, Gotenberg, Google Drive, Facebook Graph API

CRM & Support Tools: HubSpot, Apollo, ClickUp, Freshdesk, Zendesk, ServiceNow, Genesys

Security & Error Handling: Multi-layer webhook verification, HMAC-SHA256 token auth, Typed error handler sub-workflows, OAuth token rotation, Prompt injection detection, Rate limiting

Operations: Process mapping, SOP writing, SLA/KPI management, Error handling, Operation count optimization

Programming: Python, JavaScript

PROFESSIONAL EXPERIENCE

Real Time Analyst, Cognizant, Cebu City, PH

March 2024 – January 2026

Monitored live contact center operations across multiple business lines using Genesys. Focused on SLA compliance, queue health, and fixing manual reporting bottlenecks.

- Collaborated on the development and maintaining Excel-based dashboards that pulled raw Genesys data into real-time views, cutting manual reporting time by over 80%.
- Built a system that detected agent outliers in breaks, lunch, and offline statuses and automatically notified their team leads — ran without any manual monitoring.
- Identified recurring manual workflows across teams and worked with cross-functional groups to replace them with structured procedures.
- Designed Excel macro solutions to eliminate daily copy-paste tasks that had been standard practice for years.
- Managed daily EOD reports across multiple business lines consolidating raw Genesys data into Excel macro-based templates and delivering consistent, on-time outputs to stakeholders.

Service Desk Support, Cognizant, Cebu City, PH

March 2023 – March 2024

Handled escalated and aging tickets for hardware, software, network, and system configuration issues in Zendesk and ServiceNow.

- Identified knowledge gaps during support sessions and submitted tickets to update and expand the knowledge base, enabling agents to resolve recurring issues without escalation.
- Designed and implemented a structured follow-up process for aging and escalated cases, reducing open ticket backlog and improving average resolution time across the team.
- Collaborated with clients to develop SOPs and documentation templates that streamlined live troubleshooting, cutting unnecessary steps from support interactions and reducing average handling time.

Data Analyst, Office Partners 360, Cebu City, PH

May 2022 – November 2022

Validated and cleaned large customer and product datasets, built reporting pipelines, and communicated findings directly to clients.

- Corrected large datasets with customer and product inconsistencies, improving downstream reporting accuracy.
- Mapped data flows and flagged upstream process gaps that were producing errors in client-facing outputs.
- Developed and trained teammates including the team trainer on a command-line batch conversion process for WebP, TIFF, HEIC, and SVG files to JPEG, eliminating reliance on slow browser-based tools and cutting conversion time from hours to minutes.

Technical Service Representative, Sykes Asia, Cebu City, PH

March 2019 – May 2022

Multi-channel technical support (phone, chat, email) for billing, account, and technical issues.

- Handled high-volume inbound support across all channels while maintaining accurate CRM documentation.
- Identified inefficient manual steps in the support workflow and proposed procedural changes that reduced average handle time, resulting in consistent top agent recognition for multiple months.

Subject Matter Expert, Tech Mahindra, Cebu City, PH

November 2016 – January 2019

Go-to resource for frontline agents on escalated technical and process issues. Stepped up as temporary team lead for several months managing a team of 12 agents.

- Acted as temporary team lead for multiple months, handling daily reports, quality audits, and individual coaching and feedback sessions while maintaining consistent team performance.
- Supported frontline agents with escalated technical and process-related issues, contributing to standardized procedures that improved operational workflows across the team.
- Assisted in agent onboarding and process clarification, maintaining quality standards and clear communication under high-pressure conditions.

EDUCATION

Bachelor of Science in Information Technology

Major in Web Development · University of San Jose Recoletos, Cebu City, PH

AWARDS

Planetvest 8th Runner Up, Philippine Startup Challenge 7 | 2022

Fintech concept — a crowdfunding platform connecting smallholder farmers with community investors as an accessible alternative to traditional bank lending.

AUTOMATION PORTFOLIO — 16 PROJECTS

n8n Projects — Built with Claude Code via MCP

HR Automation System

[n8n](#) · [Claude Sonnet 4.6](#) · [Gutenberg](#) · [Google Drive](#) · [Google Sheets](#) · [Gmail](#) · [Claude Code / MCP](#)

Two-workflow system (67 nodes) built with Claude Code via MCP. The Onboarding Document Generator uses Claude AI to generate offer letters and onboarding packs, routes them through HR approval with a 72-hour wait node and timeout alerting, and delivers both PDFs via a welcome email with HMAC-SHA256 accept/decline buttons. The Post-Offer Process handles three input paths: one-click webhooks, Gmail reply classification using NLP to detect negotiation, and an hourly expiry monitor with auto-expiry at 120 hours. Shared error handler sub-workflow on any unhandled failure.

Incident Report System

[n8n](#) · [Claude Sonnet 4.6](#) · [Gutenberg](#) · [Google Drive](#) · [Google Sheets](#) · [Airtable](#) · [Gmail](#) · [Claude Code / MCP](#)

Two-workflow system (33 nodes) built with Claude Code via MCP. The Incident Report Generator processes submissions through 5-layer webhook security, looks up the employee, uses Claude AI to generate a structured report, renders a PDF, uploads to Google Drive, and logs to Airtable. The Status Change Poller runs every minute, detects Under Review or Closed status changes in Airtable, and routes notifications to the reporter, safety officer, and manager. Error handler classifies failures by severity and only pages the admin for infrastructure-level issues.

n8n Projects

Purchase Order Generator

[Typeform](#) · [Xero API](#) · [Google Sheets](#) · [Gmail](#) · [html2pdf](#) · [Google Drive](#)

Two-path workflow with dynamic line item extraction via regex pattern-matching on Typeform field titles, branded PDF generation, one-click approval, self-rotating Xero OAuth token management (read → check → refresh → use → write back), and automatic ACCPAY bill creation — backed by a typed error handler sub-workflow with SECURITY, XERO_TOKEN, XERO_API, SHEETS, and UNKNOWN error codes.

Job Estimate & Quote Generator

[Typeform](#) · [Claude AI](#) · [Airtable](#) · [Google Drive](#) · [Gmail](#) · [html2pdf](#)

Two-path workflow using Claude AI to generate scoped pricing, branded PDF quotes with 12% VAT, Google Drive sharing, round-robin team assignment from an active pool with empty-pool error handling, Airtable CRM logging, and daily 48-hour follow-up automation.

Timesheet Automation

[Typeform](#) · [Google Sheets](#) · [Gmail](#) · [html2pdf](#)

Three-path workflow (submission, approval, daily reminder) with 4-layer webhook security, PDF generation, one-click manager approval, 48-hour escalation, duplicate blocking, and 12 inline error handlers across 39 nodes — plus a global error sub-workflow that catches any unhandled crash and emails the admin with execution ID and direct log link.

VAPI AI Receptionist

[Vapi](#) · [Google Calendar](#) · [Airtable](#) · [Sub-workflows](#)

Voice AI that handles inbound clinic calls end-to-end — booking, rescheduling, and cancellations — via a 5-tool modular webhook architecture with single-responsibility sub-workflows, real-time Google Calendar coordination, explicit timezone normalization (UTC → Chicago local time), and graceful error fallback to a manual callback log during API outages. Runs 24/7 without human involvement.

Supabase RAG Agent

[Supabase pgvector](#) · [Gemini](#) · [Google Drive](#)

RAG agent that watches Google Drive, auto-embeds documents into Supabase pgvector on create, update, and delete events, and answers natural-language questions against an always-current knowledge base.

AI Job Scraper + Resume Optimizer

[Slack](#) · [GPT](#) · [Gmail](#) · [Upwork](#)

A single Slack message triggers a full job search pipeline — scrapes listings, filters by relevance, and generates a tailored resume, Upwork proposal, and Gmail draft per job.

AI Client Onboarding System

[Airtable](#) · [Gemini](#) · [Gmail](#) · [Slack](#)

Intake form triggers Google Drive folder creation, Airtable logging, AI-personalized welcome email, and Slack notification. Full onboarding now takes seconds instead of 4 hours.

Facebook AI Agent

[Gemini](#) · [Facebook Graph API](#) · [Webhooks](#)

AI agent reads the Employee Handbook and replies to Facebook Messenger messages 24/7 with accurate, context-aware answers — zero human effort.

HeyGen Automated Video Production

[Gemini](#) · [HeyGen API](#) · [Gmail](#) · [Google Sheets](#)

Polls Google Sheets every 5 minutes, enhances scripts with AI, submits to HeyGen v3 API, and emails the finished video when ready. End-to-end video production with no manual steps.

Make Projects

Xero → Asana Transactions Export

[Xero](#) · [Asana](#) · [Google Sheets](#)

Watches completed Asana tasks, pulls Xero transactions via API, writes a CSV to Sheets, and attaches it back to the Asana task. Zero-touch monthly reporting.

Sort Gmail Attachments to Drive

[Gmail](#) · [Google Drive](#) · [AI](#) · [Google Sheets](#)

Watches Gmail, uses AI to classify each attachment, uploads it to the correct Drive folder, and logs it to Sheets with an automatic email confirmation to the team.

Zapier Projects

Asana CRM Lead Engagement

[Asana](#) · [Gmail](#) · [Google Drive](#) · [CRM](#)

Multi-path Zap splits leads by stage (Ready, No Response, Quoted, Approved, Paid) and triggers the right Gmail, Drive, and Asana actions for each. Every lead gets the right follow-up at the right time.

Automated Lead Enrichment

[Apollo](#) · [Slack](#) · [Gmail](#) · [Google Sheets](#)

Catches inbound lead webhooks, enriches via Apollo, splits by priority, logs high-priority leads to Sheets, and notifies Sales on Slack and Gmail with AI-drafted first-touch emails.

AI Content Repurposing

[AI](#) · [Google Drive](#) · [Facebook](#) · [LinkedIn](#)

Watches Drive for new video or audio files, transcribes with AI, generates blog posts and social captions, then publishes to Facebook and LinkedIn automatically.
